

# CHiLD POVERTY ACTION GROUP

Dear Colleague/friend

On Monday 19<sup>th</sup> May 7pm TV3 Campbell Live presented an in depth piece about the high rates of preventable disease in NZ children, and how some of these children are permanently damaged.

It followed publication two weeks ago of "Left Behind – How social and income inequalities damage New Zealand children" <http://www.cpag.org.nz/resources/>

This TV3 programme is a call to the country for more action to stop the preventable damage to our children.

We believe that this is a "must watch" for all New Zealanders. It is available at <http://www.tv3.co.nz/News/Story/tabid/209/articleID/56333/Default.aspx>

I would appreciate it if you would consider passing on this information widely, and through your email networks to people in all walks of life, including business, industry, education, social development, justice and health.

Best wishes

Innes
